Lesson 1 teacher guide

40 minutes / Years 7 and 8 / Work in pairs

Before class Print one double-sided worksheet per pair. Display the photos and the cycle on the lesson page, or use the poster. Choose paper or the online team card as the class record.

By the end Each pair can point to two photo details, name one possible difficulty and ask one question to investigate.

0-5 min	**Look** Show the two photos. Give quiet looking time, then ask each partner to point to a detail.
5-10 min	**Separate seeing and thinking** Model the brick example below. Pupils record what they can see and what still needs checking.
10-13 min	**Find today's step** Show the cycle and point to Ask. Explain that new evidence can send us back to an earlier step.
13-23 min	**Name a possible problem** Pairs choose bees, a beekeeper or both and write one possible difficulty. Ask them to mark an assumption.
23-34 min	**Write the next question** Ask what evidence would help. Pairs write one question for Lesson 2, then agree who will look and by when.
34-40 min	**Check and keep one record** Swap with another pair. Check who the problem affects and whether the question can be investigated. Collect the worksheet or save the team card.

Model one thought

See There is a brick on the lid.
Think It might hold the lid in place.
Ask How do documented hive designs keep their lids in place?

If a pupil proposes a sensor, ask what difficulty it would help with. Save the idea for Imagine. If a pupil gets stuck, invite them to point to one part of the photo and describe it aloud.
